Actual CPU strong scaling: distinct recorded workload scopes
Ideal
Atomx Na+ full SD action
Atomx Yb term2 stress stage
AMBiT BeII full CLI
EXP-T finite CCSDT backend
FAC full four-ion frozen CI/E1 CLI workflow
Atomx full four-ion frozen CI/E1 CLI workflow
Paired speedup S = T1 / Tp
Logical team efficiency E = S / p (%)
Requested workers p (fixed work)
Requested workers p (fixed work)
Medians and full observed paired ranges; not confidence intervals. Only admitted CPU groups plotted; rejected CPU/GPU observations remain in reports.
